

JavaScript is a scripting language developed by Netscape that is only marginally related to Java. JavaScript is intended to provide a quick and simple language for enhancing Web pages and servers. JavaScript is embedded as a small program in a web page that is interpreted and executed by the Web client. You can:

JavaScript

- Enhance web pages using Select and other objects, create interactive images, change styles dynamically, load pages into new windows and verify form data.
- Program the Windows object, the Document object, work with string and RegExp objects, handle browser specific differences.
- Work with error-handling and debugging, manipulate arrays and data tables, use cookies and communicate with applets.
- Produce dynamic HTML cross browser techniques allowing animation and handling user input with events.
- Plus lots more ...

Are you taking advantage of what JavaScript has to offer?

A-Certif Ltd provides **JavaScript and Dynamic HTML training courses at many levels**, from a basic web enhancement class to advanced programming classes. Our experienced trainers are knowledgeable and friendly and will answer all your questions and make sure you are happy with every topic that you need to cover.

We offer **public courses** which have a standard content and take place at scheduled times. Alternatively we provide **private courses** which can be tailored to suit your particular learning requirements and delivered when and where you want them.
